Contents	VI
List of Figures	IX
List of Tables	XI
1. Einleitung	1
1.1. Motivation und Problemstellung	1
1.2. Zusammenfassung und Publikationsdetails	9
2. Entscheidungsunterstützung im Rettungsdienst	21
2.1. Grundlagen des Rettungsdienstes	22
2.2. Bewertungskriterien und interdependente Interessen	24
2.3. OR-Methoden zur Entscheidungsunterstützung im Rettungswesen .	28
2.4. Ausblick und zukünftige Herausforderungen	32
3. Data-Driven Ambulance Optimization Considering Dynamic and Economic Aspects	37
3.1. Introduction	38
3.2. Identifying Empirically Necessary Coverage	38
3.2.1. Model with Empirically Necessary Coverage	40
3.2.2. Time-Dependent Considerations	41
3.3. Improvement of Status Quo	42
3.4. Conclusions	43

4. Time-Dependent Ambulance Allocation Considering Data-Driven Empirically Required Coverage	45
4.1. Introduction	46
4.2. Literature Review	48
4.2.1. Early Models	48
4.2.2. Dynamic Variations	49
4.2.3. Contribution	49
4.3. Empirically Required Coverage and Dynamic Considerations	50
4.3.1. Empirical Distribution of Simultaneous Demand	50
4.3.2. Determination of Empirically Required Coverage	51
4.3.3. Dynamic Considerations	53
4.4. Problem Statement and Modeling Framework	54
4.5. Case Study and Computational Results	58
4.5.1. Time-Dependent Data	61
4.5.2. Solution	66
4.5.3. Evaluation	68
4.6. Conclusion	73
5. Analysis of Ambulance Location Models Using Discrete Event Simulation	83
5.1. Introduction	84
5.2. Ambulance Location Models	85
5.3. Discrete Event Simulation of EMS Systems	87
5.4. Case Study and Results	89
5.5. Conclusion and Outlook	91
6. Reorganizing an Existing Volunteer Fire Station Network in Germany	93
6.1. Introduction	93
6.2. Problem Statement	95
6.3. Locating Volunteer Fire Stations–Basis Service Level	97
6.3.1. Required Number of Volunteer Fire Stations	98
6.3.2. Data Setting	99

6.3.3. Evaluation of Basic Supply Level	101
6.4. Impact of Reorganizing an Existing Network of Volunteer Fire Stations	103
6.4.1. Decision Criteria and Optimization Models	104
6.4.2. Optimal Closing Sequence	105
6.4.3. Simultaneous Relocation Model	109
6.5. Conclusions	113
7. Optimal Adaptation Process of Emergency Medical Services Systems in a Changing Environment	117
7.1. Problem Description and Criteria of an Optimal Adaptation Process	118
7.2. Model and Solution Approach	119
7.3. Case Study and Results	122
7.4. Conclusion and Outlook	124
8. Robuste Optimierung	127
8.1. Einführung	127
8.2. Definitionen	129
8.2.1. Unsichere Optimierungsmodelle	130
8.2.2. Robustheitskriterien	132
8.3. Neuere Ansätze der robusten Optimierung	133
8.3.1. Robuster Optimierungsansatz nach Soyster	134
8.3.2. Polyedrische und ellipsoidale Unsicherheitsmengen	135
8.3.3. Intervall-Unsicherheitsmengen	139
8.4. Robuste Optimierung mit Szenarien	150
8.4.1. Robuste Optimierung nach Mulvey	150
8.4.2. Robuste Optimierung nach Kouvelis und Yu	153
8.5. Vergleich robuster Optimierungsansätze	156
8.6. Zusammenfassung und Ausblick	157
9. Optimal Adaptation Process of EMS Systems in a Changing and Un- certain Environment	165
9.1. Introduction	166

9.2. Literature Review	168
9.2.1. Covering Models	169
9.2.2. EMS Literature	170
9.2.3. Dynamic Facility Location and Facility Location under Un- certainty	172
9.3. Problem Description and Criteria of an Optimal Adaptation Process	174
9.3.1. Evaluation Criteria of an EMS System	174
9.3.2. Optimal Adaptation Process	179
9.3.3. Dynamic Adaptation Set Covering Problem	180
9.4. Optimal Adaptation Concerning Uncertain Environmental Develop- ments	186
9.4.1. Modeling Framework Concerning Uncertainty	187
9.4.2. Robust Covering System Adaptation Problem	190
9.4.3. Expected Covering System Adaptation Problem	191
9.4.4. Expected β -Robust α -Reliable Covering Problem	192
9.5. Exemplary Application	195
9.5.1. Environmental Developments and Parameters	196
9.5.2. Solution and Results—Optimal System Adaptation Process .	199
9.5.3. Further Recommendations and Integration into an Adaptive Planning Framework	209
9.6. Conclusion and Outlook	211
9.7. Appendix: Model Extensions and Scenario Generation	212
9.7.1. Fixed EMS Stations	213
9.7.2. Demand Nodes with Different Importance and Hard Covering Constraints	213
9.7.3. Different Coverage Radii	214
9.7.4. Alternative Adaptation Constraints Using Hamming Distance	215
9.7.5. Periodic Robustness Constraints	215
9.7.6. Scenario Generation	217
