Contents

1 Introduction **1**

1.1 Numerical simulation and approximation methods 1

1.2 Goal and outline 3

2 Soft Particle Code (SPARC) **5**

2.1 Introduction 5

2.2 Discretization of continuum 8

2.3 Neighbor search 9

2.4 Spatial derivatives 10

2.4.1 Polynomial interpolation/approximation 10

2.4.2 Evaluation of velocity gradient $\mathbf{L} = \nabla \mathbf{v}$ at one particle . . . 12

2.4.3 Evaluation of $\nabla \cdot \mathbf{T}$ at one particle 13

2.5 Constitutive model 13

2.6 System of equations 15

2.6.1 Evaluation of $\mathbf{T}^{t+\Delta t}$ at all particles 15

2.6.2 Evaluation of $\nabla^{t+\Delta t} \cdot \mathbf{T}^{t+\Delta t}$ at all particles 16

2.6.3 Obtaining the system of equations 17

2.7 Numerical Solver 19

2.7.1 The Newton's method 20

2.7.2 Reduced stiffness matrix 22

2.7.3 Marquardt's Algorithm 23

2.7.4 Arc-length method 27

2.7.5 Time integration scheme of stress 33

2.8 Pressure boundary condition 39

2.9 Parallelization 39

3 Parameter Study **41**

3.1 Benchmark 41

3.1.1 Particle configuration and boundary conditions 41

3.1.2 Neighbor search and support size 42

3.1.3 Polynomial order 43

3.2 Numerical solvers 43

3.2.1 Results from the benchmark 43

3.2.2 Role of a weak zone 48

3.2.3 Brief summary 51

3.3 Support size 52

3.3.1 First-order polynomials with fixed-radius search method . . 53

3.3.2 Second-order polynomials with fixed-radius search method . 53

3.3.3 Second-order polynomials with k-nn search 54

3.3.4 Brief summary 57

3.4 Irregular array of particles 57

3.4.1 First-order polynomials with fixed-radius search method . . 57

3.4.2 Second order polynomials with fixed-radius search method . 59

3.4.3 First order polynomials with k-nn search 60

3.4.4 Second order polynomials with k-nn search 61

3.4.5 Brief summary 62

4 Simulation of Conventional Laboratory Tests **63**

4.1 Oedometer test 63

4.1.1 Discretization of the specimen 64

4.1.2 Initial values 64

4.1.3 Numerical solver 66

4.1.4 Time integration 67

4.1.5 Simulation results 67

4.2 Triaxial test 67

4.2.1 Discretization of the specimen 68
4.2.2 Boundary conditions and degrees of freedom 68
4.2.3 Governing equations 70
4.2.4 Initial conditions 70
4.2.5 Simulation results 71

5 Validation **79**
5.1 Oedometer test 79
5.2 Triaxial test 80
5.2.1 Homogeneous deformation 80
5.2.2 Inhomogeneous deformation 81
5.3 Simulation with FE method 81

6 Simulation of the 'Zig-Zag'-Tests **85**
6.1 Boundary conditions 85
6.2 Simulation set-ups 88
6.3 Results 92
6.3.1 Larger number of neighbors 97
6.3.2 Second order polynomials 101
6.3.3 More rigorous stop criterion 104
6.4 Summary 104

7 Summary, Limitations and Outlook **107**
7.1 Summary 107
7.2 Limitations 108
7.3 Outlook 109

A Generation of a Point Cloud **115**

B Sub-Domain k-Nearest Neighbor Search **117**

B.1 Sub-domain k-nn search 118

B.1.1 Domain partitioning by sorting coordinates of points 118

B.1.2 Indexing sub-domains 119

B.1.3 Neighbor search of sub-domains 119

B.1.4 k-nn search 119

B.2 Efficiency of the sub-domain k-nn search method 120

C Mapping Vector $\mathbf{m}$ **125**

D Determination of Normal Vectors on a Surface **129**

E Sparse Matrix **133**

F Evolution of Shear Bands **135**

G An Example of Scaling a Matrix **137**

H An example for the explanation of arc-length parameterization **139**

I Derivation of the Equation of a Plane **141**

J Sand Eddies Induced by Cyclic Tilt of a Retaining Wall **143**

J.1 Introduction 143

J.2 Experimental setup 145

J.2.1 Apparatus 145

J.2.2 Test series 145

J.2.3 Preparation of the backfill 145

J.2.4 Particle image velocimetry 146

J.3 Results 147

J.3.1 Evolution of free surface 147

J.3.2 Trajectories and eddies 151

J.3.3 Evolution of passive slip surfaces 158

J.3.4 Evolution of void ratio 159
J.4 Conclusions 166

K One-dimensional Example **167**
K.1 Solution to the example using SPARC 167
K.2 Arc-length method 174
K.2.1 Solution using arc-length method: Calculation 175
K.3 Pseudo-arc-length method 177
K.3.1 Solution using the pseudo-arc-length method 178

L Velocity of a Point on a Tilting Wall **181**

M List of Symbols **183**
