1	Introduction	1
1.1	Weak solutions	2
1.2	Strong solutions	3
1.3	The influence of surface roughness to the boundary behaviour to weak solutions	5
1.4	Construction of some special domains with rough boundaries	6
1.5	Optimizing the heat energy transferred to the exterior	7
2	Preliminaries	9
2.1	Notation, function spaces and basic inequalities	9
2.2	The Bochner integral and spaces of Bochner integrable functions	14
2.2.1	Positive definite, self-adjoint operators on Hilbert spaces	24
2.2.2	The Stokes operator and the Laplace operator: Definition and Properties	27
3	Modelisation	33
3.1	Conservation equations	34
3.2	The Boussinesq approximation	38
4	Weak solutions of the Boussinesq equations	41
4.1	Domains satisfying the uniform Lipschitz condition and the surface measure	41
4.2	Definition of weak solutions	46
4.3	Formulation of the Boussinesq system as a nonlinear operator equation	47
4.4	Existence of weak solutions	55
4.5	Further properties of weak solutions.	67
5	Strong solutions of the Boussinesq equations in general domains	73
5.1	Weak solutions and strong solutions	74
5.2	Construction of strong solutions in general domains	76
5.3	Regularity of strong solutions of the Boussinesq equations	87
5.3.1	Outline of this section	87
5.3.2	Preparatory lemmata	88
5.3.3	Proof of the smoothness of a strong solution	91
5.4	Regularity criteria for the Boussinesq equations in general domains	98

6	Young Measures	107
6.1	Motivation and interpretation of Young Measures	107
6.2	Preliminaries	108
6.3	Existence theorems	112
6.4	Generating some special gradient Young measures	115
7	Influence of boundary rugosity to weak solutions of the Boussinesq equations	123
7.1	Sequential stability of the Boussinesq equations on a fixed domain . .	124
7.2	The Young measure approach to determine the boundary behaviour .	139
7.2.1	Preliminary results	139
7.2.2	The influence to the Robin boundary condition	145
7.2.3	The influence to the velocity field	149
7.3	Main results	157
8	Construction of some special domains with rough boundaries	165
9	Optimization of the heat energy transferred to the exterior	173
9.1	Mathematical formulation of the optimization problems	173
9.2	Preliminary lemmata	175
9.3	Existence of solutions of the optimization problems	180
10	Appendix	183
