

Contents

1	Initial Value Problems	1
1.1	Introduction	1
1.2	Definition of an initial value problem (IVP)	4
1.3	Existence and uniqueness of solutions of IVPs	6
1.4	Dependence of solutions on initial values and parameters	10
1.5	Prolongation of solutions	14
1.6	Exercises	18
2	Continuous Dynamical Systems	23
2.1	Introduction	23
2.2	Definition of a dynamical system	24
2.2.1	Orbits, invariant sets, invariant functions and stability	27
2.3	Autonomous IVPs as continuous dynamical systems	30
2.3.1	Flows, vector fields and invariant functions	35
2.3.2	Evolution of phase space volume	48
2.3.3	Stability of fixed points and Lyapunov functions	53
2.3.4	Stability properties of linear homogeneous IVPs	61
2.3.5	Stability properties of linearized IVPs	71
2.4	Topological equivalence of dynamical systems	76
2.5	Stability properties of nonlinear IVPs	81
2.5.1	Existence of invariant stable and unstable manifolds	82
2.5.2	Existence of invariant center manifolds	85
2.6	Basic facts on non-autonomous linear IVPs	88
2.6.1	Periodic linear IVPs	92
2.7	Basic facts on local bifurcation theory	96
2.7.1	One-parameter local bifurcations	99
2.7.2	Saddle-node bifurcations	100
2.7.3	Hopf bifurcations	103
2.8	Exercises	107
3	Lagrangian and Hamiltonian Mechanics on Euclidean Spaces	125
3.1	Introduction	125
3.2	Definition of a mechanical system and Newton equations	126

3.3	Lagrangian mechanics	131
3.3.1	Euler-Lagrange equations	132
3.3.2	Lagrangians for conservative systems	137
3.3.3	Symmetries of Lagrangians and Noether Theorem	140
3.4	Canonical Hamiltonian mechanics	146
3.4.1	Hamilton equations and Hamiltonian flows	146
3.4.2	Symplectic structure of the canonical Hamiltonian phase space	150
3.4.3	Canonical Poisson brackets	155
3.4.4	Canonical and symplectic transformations	160
3.4.5	The Lie condition and the canonical symplectic 2-form	170
3.4.6	Generating functions of canonical transformations	180
3.5	Exercises	185
4	Introduction to Hamiltonian Mechanics on Poisson Manifolds	199
4.1	Introduction	199
4.2	Basic facts on smooth manifolds	202
4.2.1	Definition of a smooth manifold	203
4.2.2	1-forms and vector fields	205
4.2.3	Maps between manifolds	208
4.2.4	Distributions	212
4.2.5	k -forms and k -vector fields	214
4.2.6	Lie derivatives	218
4.2.7	Matrix Lie groups and matrix Lie algebras	220
4.3	Hamiltonian mechanics on Poisson manifolds	224
4.4	Hamiltonian mechanics on symplectic manifolds	232
4.5	Foliation of a Poisson manifold	237
4.6	Completely integrable systems on symplectic manifolds	241
4.7	Exercises	250
