Acronyms	xi
Abstract	1
Deutsche Kurzfassung	3
1. Introduction	9
1.1. Motivation	9
1.2. Communication System	11
1.3. Contribution of the Thesis	12
2. Presentation Layer: Linear Precoding	15
2.1. Motivation	16
2.2. Problem Setup	17
2.2.1. Control System	17
2.2.2. Communication System	17
2.3. Linear Precoding	18
2.4. Kalman Filtering with Linear Precoding	18
2.5. Examples	22
2.6. Summary	25
3. Transport Layer: Retransmitting Measurements	27
3.1. Problem Setup	27
3.2. Transmission and Retransmission Schemes	29
3.2.1. Previous Transmission and Retransmission Schemes	29
3.2.2. New Retransmission Scheme	31
3.3. Example	34
3.4. Summary	37
4. Transport Layer: Optimal Sampling Time	39
4.1. Introduction	39
4.2. Problem Setup	41
4.2.1. Control System	41
4.2.2. Communication System	42
4.2.3. Discretization	42
4.3. Design of the Transport Layer	44

4.4. Controller Design	48
4.5. Examples	52
4.6. Summary	58
5. Network Layer: Routing and Controller Placement	59
5.1. Problem Setup	59
5.1.1. Control System	60
5.1.2. Communication System	61
5.2. Joint Design	62
5.2.1. Discretization	62
5.2.2. Loss and Delay seen by the Controller	63
5.2.3. Controller Design	64
5.3. Examples	66
5.4. Summary	71
6. MAC Layer: Time-Triggered vs. Event-Based Control	73
6.1. Introduction	73
6.2. Problem Setup	76
6.3. Sampling Schemes	77
6.3.1. Time-Triggered Control	77
6.3.2. Event-Based Control	78
6.3.3. Comparing Time-Triggered and Event-Based Control	81
6.4. Communication System	82
6.4.1. Deterministic MAC Protocols	82
6.4.2. Contention Based MAC Protocols	83
6.5. Control and Communication	93
6.5.1. Time-Triggered Control with a Deterministic MAC	94
6.5.2. Time-Triggered Control with a Contention Based MAC	96
6.5.3. Event-Based Control with a Deterministic MAC	96
6.5.4. Event-Based Control with a Contention Based MAC	97
6.5.5. Comparison of the Different Control and Communication Schemes	102
6.6. Summary	104
7. Conclusions	105
7.1. Summary	105
7.2. Outlook	106
A. Kalman Filtering with Intermittent Observations	111
B. Scale and Location Parameters of Probability Distributions	115
C. Remaining Proofs of Chapter 5	117
C.1. Proof of Theorem 5.1	117
