

Contents

1. Introduction	1
2. Background and Preliminaries	7
2.1. Dynamical systems and stability	7
2.2. Discrete-time linear systems	9
2.3. Event-triggered and self-triggered control	11
2.4. Set-valued estimation	13
2.4.1. Set-valued estimates from linear estimator dynamics	14
2.4.2. Set-valued moving-horizon estimation	15
2.5. Model predictive control	16
3. Linear Systems Perturbed by Bounded Disturbances	23
3.1. Preliminaries	24
3.2. Lyapunov-based approach	26
3.2.1. Theoretical results	26
3.2.2. Output feedback	28
3.2.3. Computational aspects	33
3.2.4. Numerical examples	37
3.3. Set-based approach	42
3.3.1. State feedback	42
3.3.2. Analysis of given aperiodic schemes	43
3.3.3. Output feedback	47
3.3.4. Computational aspects	48
3.3.5. Numerical examples	53
3.4. Summary	57
4. Stochastic Threshold Design in Event-triggered Control	59
4.1. Threshold design for arbitrarily distributed disturbances	61
4.1.1. Probability assignment	63
4.1.2. Expected value assignment	67
4.2. Stochastic thresholds for Gaußian noise disturbances	69
4.2.1. State-Feedback	70
4.2.2. Output feedback	76
4.3. Summary	78

5. Aperiodic Model Predictive Control of Constrained Linear Systems	79
5.1. Lyapunov-based approach	81
5.1.1. A Lyapunov function for robust MPC	81
5.1.2. Relaxing the rate of decrease	82
5.1.3. Aperiodic control algorithms	84
5.1.4. Implementation	87
5.2. Mixed set–Lyapunov approach	92
5.2.1. Feasibility by value function decrease, stability by set-membership condition	92
5.2.2. Aperiodic control algorithms	93
5.2.3. Implementation	97
5.3. Purely set-based approach	100
5.3.1. Feasibility from set-membership conditions	100
5.3.2. Aperiodic control algorithms	102
5.3.3. Implementation	105
5.4. Threshold-based event-triggered MPC: analysis and stochastic design . .	106
5.5. Numerical example	108
5.6. Summary	111
6. Output-feedback Event-triggered Model Predictive Control	113
6.1. Set-valued moving horizon estimation in model predictive control	117
6.1.1. General results	117
6.1.2. Realization with set-valued moving horizon estimation	122
6.1.3. Implementation	126
6.1.4. Numerical example	127
6.2. Event-triggered output-feedback control	131
6.2.1. Closed-loop properties	131
6.2.2. Implementation	133
6.2.3. Numerical Examples	135
6.2.4. Outlook: extension to self-triggered control	137
6.3. Summary	138
7. Conclusions	139
A. Auxiliary Results	143
B. Proofs of Statements	149
B.1. Proof of Theorem 2.1	149
B.2. Proof of Theorem 2.3	149
B.3. Proof of Proposition 2.1	150
B.4. Proof of Lemma 3.1	151
B.5. Proof of Lemma 3.2	152

B.6. Proof of Theorem 3.5	153
B.7. Proof of Lemma 4.1	154
B.8. Proof of Lemma 4.2	154
B.9. Proof of Theorem 4.1	155
B.10. Proof of Lemma 4.3	156
B.11. Proof of Lemma 4.4	157
B.12. Proof of Theorem 4.2	159
B.13. Proof of Corollary 4.1	162
B.14. Proof of Lemma 5.1	163
B.15. Proof of Lemma 5.2	164
B.16. Proof of Proposition 5.1	165
B.17. Proof of Theorem 5.3	165
B.18. Proof of Theorem 5.5	166
B.19. Proof of Lemma 5.3	167
B.20. Proof of Lemma 5.4	168
B.21. Proof of Theorem 5.6	169
B.22. Proof of Theorem 5.8	169
B.23. Proof of Lemma 5.5	169
B.24. Proof of Theorem 5.9	171
B.25. Proof of Lemma 5.6	172
B.26. Proof of Lemma 5.7	175
B.27. Proof of Theorem 6.1	175
B.28. Proof of Lemma 6.2	176
B.29. Proof of Lemma 6.3	177
B.30. Proof of Lemma 6.4	179
B.31. Proof of Theorem 6.2	181
C. Numerical Data for the Examples in Chapter 5	185
