|-------------------------------------------------------------------------|------------|
| <b>Introduction</b>                                                     | <b>iii</b> |
| <b>Zusammenfassung in deutscher Sprache</b>                             | <b>ix</b>  |
| <b>1 Preliminaries</b>                                                  | <b>1</b>   |
| 1.1 Notation . . . . .                                                  | 1          |
| 1.2 Fourier Transform on Locally Compact Abelian Groups . . . . .       | 2          |
| 1.3 Function Spaces . . . . .                                           | 5          |
| 1.3.1 Projected Subspaces . . . . .                                     | 10         |
| 1.4 Anisotropic Distance Function . . . . .                             | 11         |
| 1.5 Structure Results for Distributions and Functions . . . . .         | 14         |
| 1.6 Convergence Results of Distributions . . . . .                      | 19         |
| 1.7 Maximal Operators and Functions . . . . .                           | 22         |
| 1.8 The Laplace Operator with Navier Type Boundary Conditions . . . . . | 26         |
| <b>2 Harmonic Analysis</b>                                              | <b>29</b>  |
| 2.1 Nikol'skij-Plancherel-Polya Type Inequalities . . . . .             | 30         |
| 2.2 Transference of Vector-valued Multipliers . . . . .                 | 32         |
| 2.3 Littlewood-Paley Decomposition . . . . .                            | 38         |
| 2.3.1 Anisotropic Extension Results . . . . .                           | 38         |
| 2.3.2 The Decomposition Result . . . . .                                | 44         |
| <b>3 Time-Periodic Anisotropic Function Spaces</b>                      | <b>51</b>  |
| 3.1 Basic Properties . . . . .                                          | 52         |
| 3.1.1 Independence of the Decomposition . . . . .                       | 58         |
| 3.1.2 Embedding Results . . . . .                                       | 64         |
| 3.1.3 Definition on Domains . . . . .                                   | 73         |
| 3.2 Pointwise Multiplication . . . . .                                  | 75         |
| 3.3 Extension Operators . . . . .                                       | 82         |
| 3.3.1 Extension Operators in Hölder Spaces . . . . .                    | 86         |
| 3.4 Trace Operators . . . . .                                           | 89         |

|          |                                                                                                         |            |
|----------|---------------------------------------------------------------------------------------------------------|------------|
| <b>4</b> | <b>The Equations of Magnetohydrodynamics</b>                                                            | <b>95</b>  |
| 4.1      | Properties of the Boundary Conditions and Operator Theory . . . . .                                     | 97         |
| 4.2      | Time-Periodic Solutions to the Heat Equation with Perfect Conductivity Boundary<br>Conditions . . . . . | 102        |
| 4.2.1    | The Whole and the Half Space . . . . .                                                                  | 102        |
| 4.2.2    | Bounded Domains . . . . .                                                                               | 105        |
| 4.3      | Perturbed Linear Theory . . . . .                                                                       | 112        |
| 4.4      | The Nonlinear Problem . . . . .                                                                         | 114        |
| <b>5</b> | <b>Appendix</b>                                                                                         | <b>119</b> |
| 5.1      | Auxiliary Results . . . . .                                                                             | 119        |
| 5.2      | Lifting of the Divergence . . . . .                                                                     | 125        |
|          | <b>Bibliography</b>                                                                                     | <b>127</b> |
